

Press-in station for inserts

● Mechanical engineering

● Realizations

● Cabling

○ Machines

The tooling allows an operator to fit 7 M3 size inserts into a plastic injection part (defibrillator housing shell).

This tool can be placed on a workplan.

Functioning :

The operator places the 7 inserts in a cavity.

The defibrillator box is placed in its receptacle manually. The receptacle is mounted on an XY-crossing trolley.

A transparent mask is placed on the box to help the operator to target the location of the inserts.

The operator has a free handle vertically.

At the end of this handle, a suction nozzle allows the inserts to be picked up one by one and presented at their insertion point.

The operator presses the two-hand button to insert the M3 insert into the plastic shell.

SPECIFICATIONS :

- **87 psi pneumatic**
- **230V Electric**
- **Size 31.7x24.8 h=33 inch**
- **Weight = 143 lb**
